

# HAMONI SYMMETRICAL CONFIGURATIONS

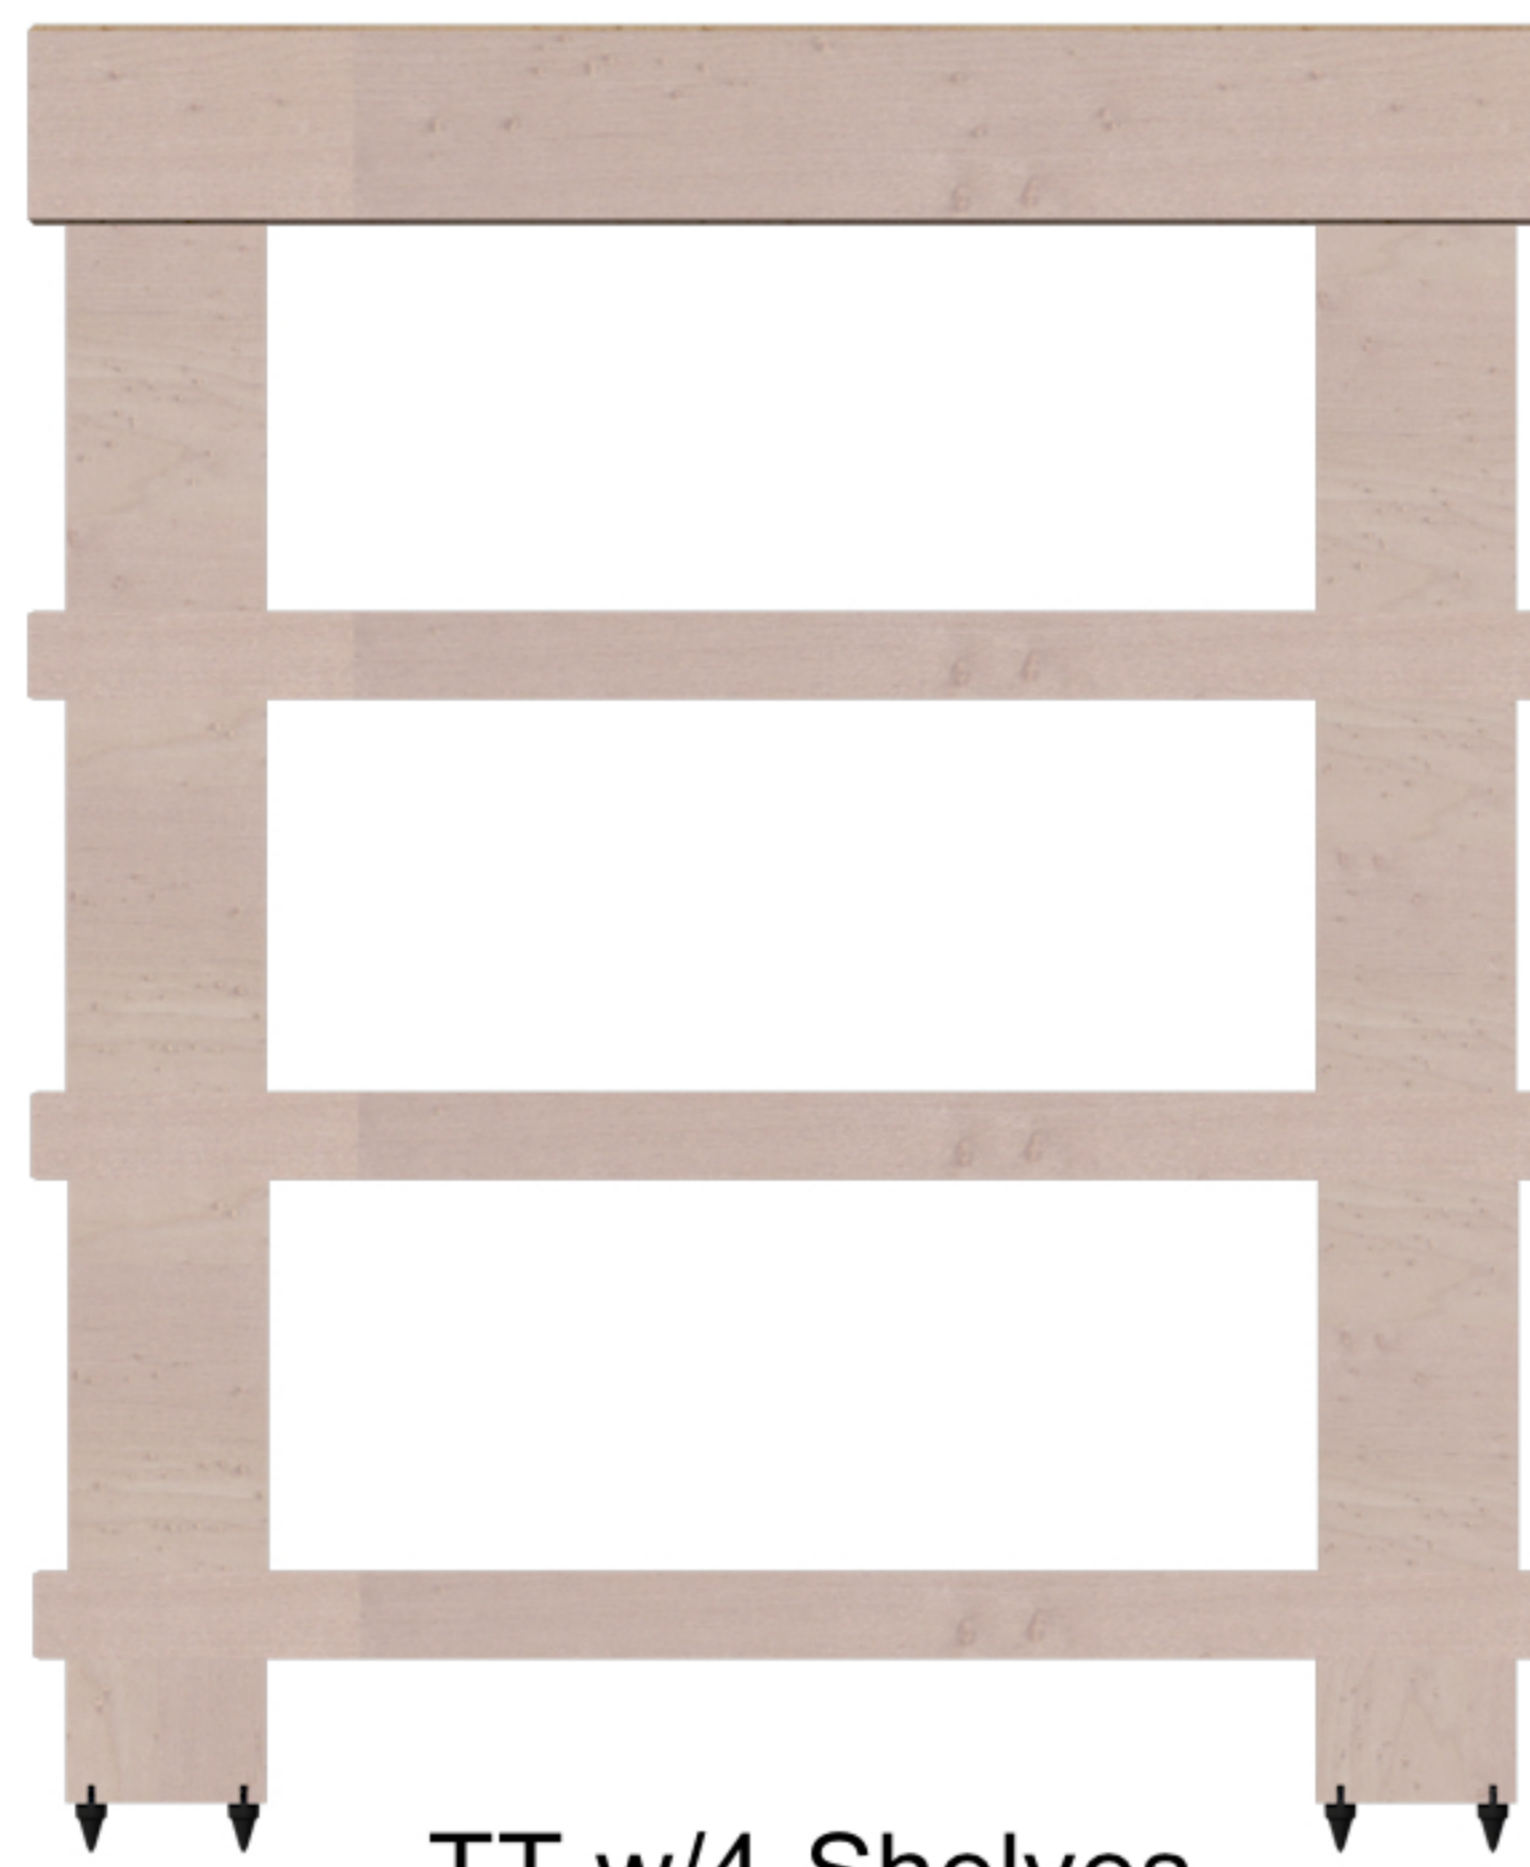

## SINGLE WIDE

TT w/2 Shelves

TT w/3 Shelves

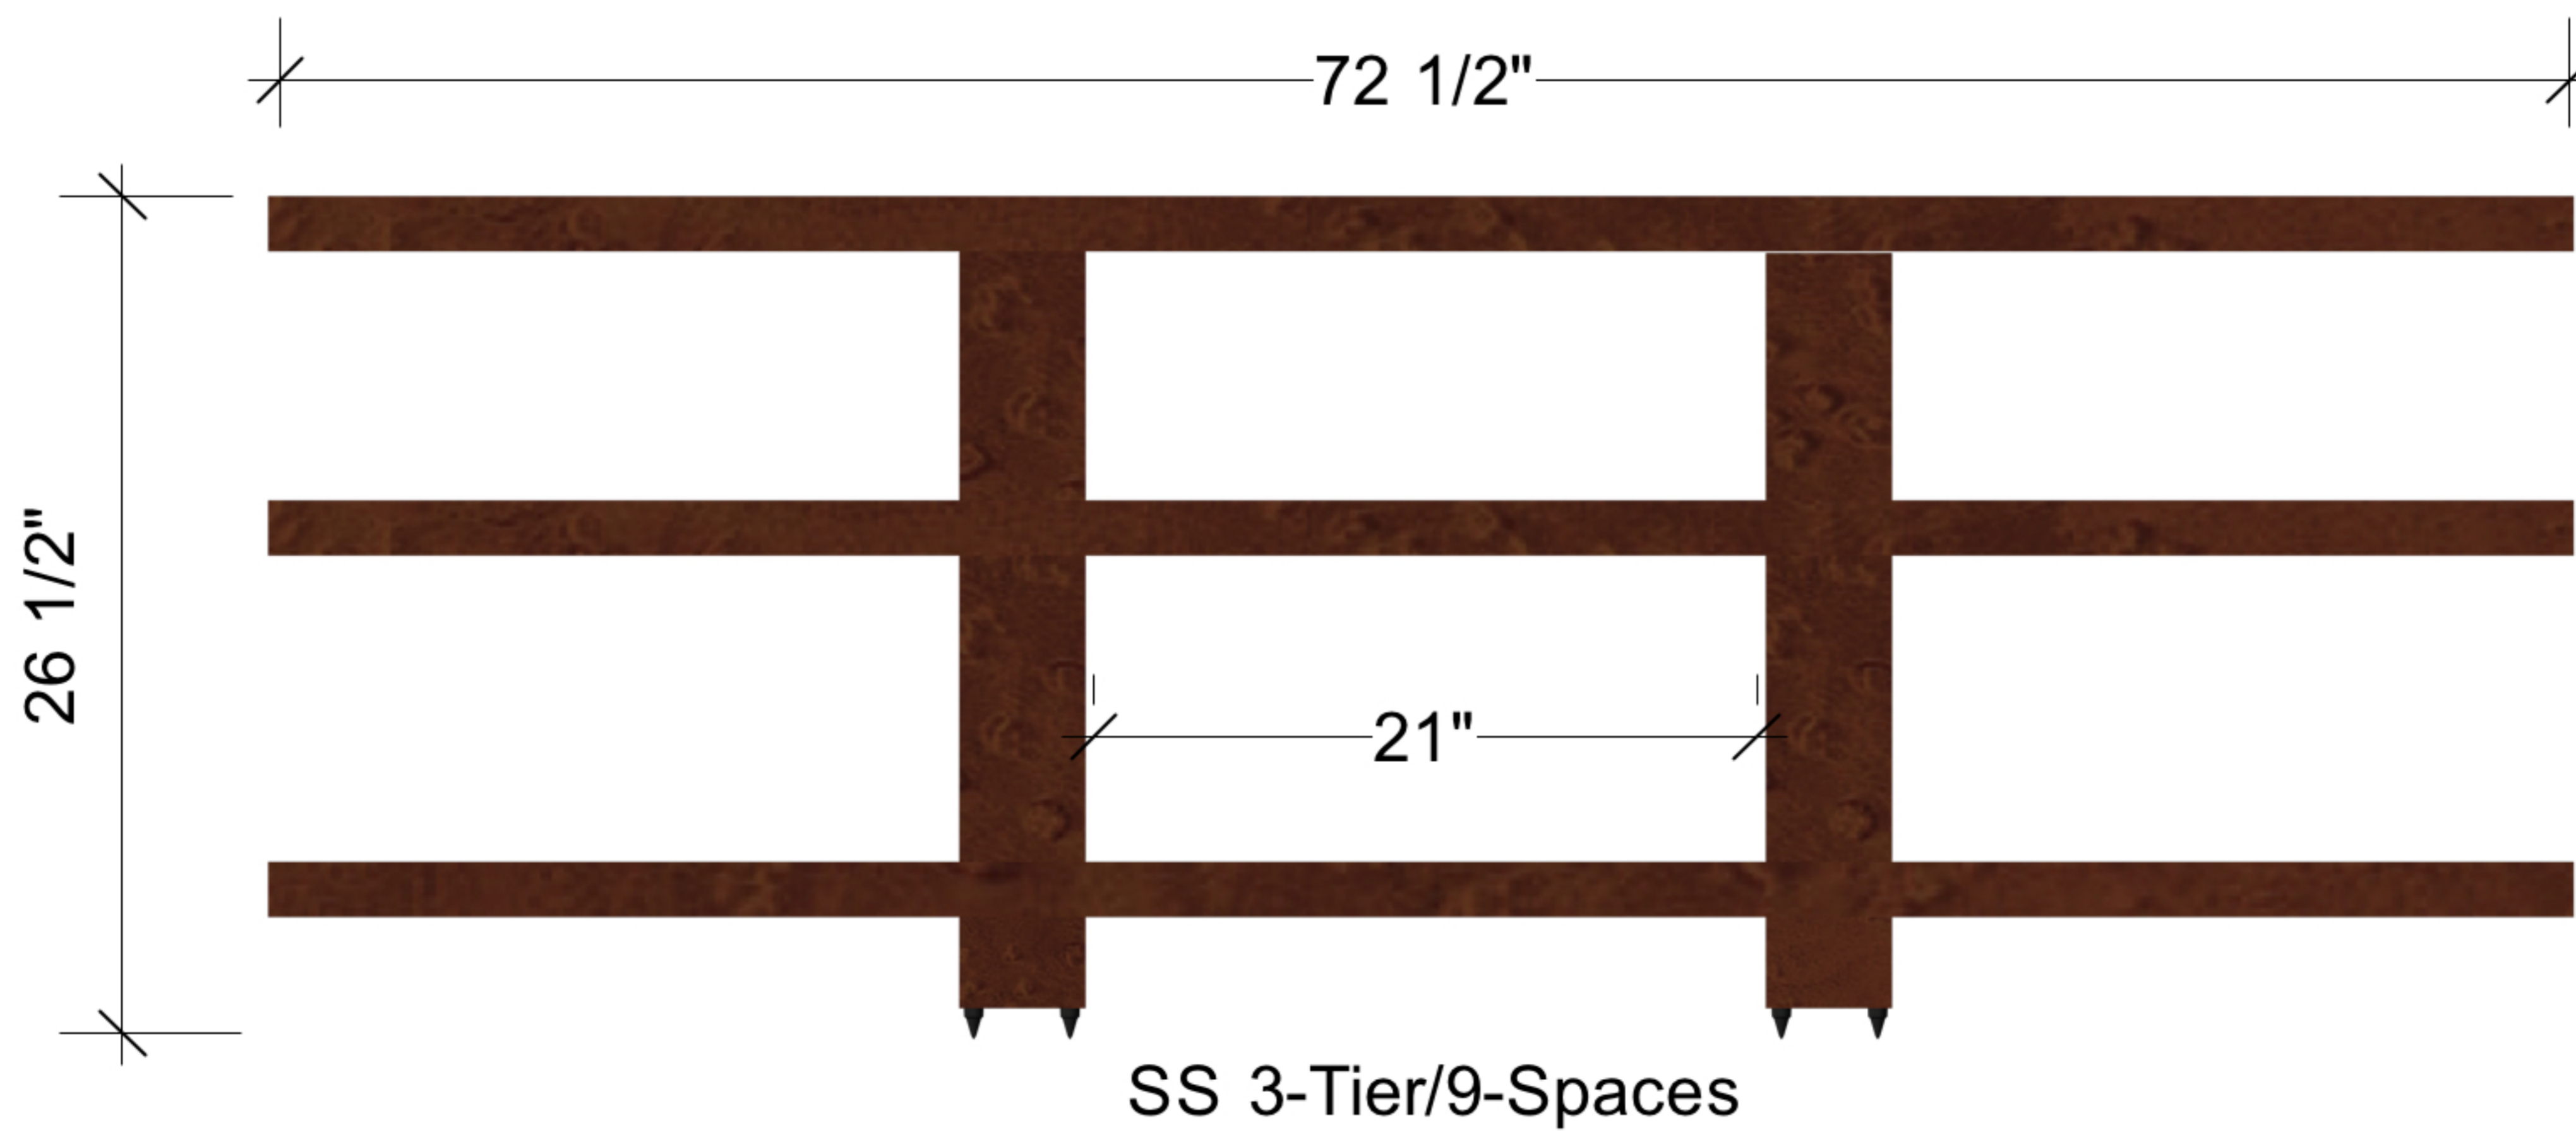

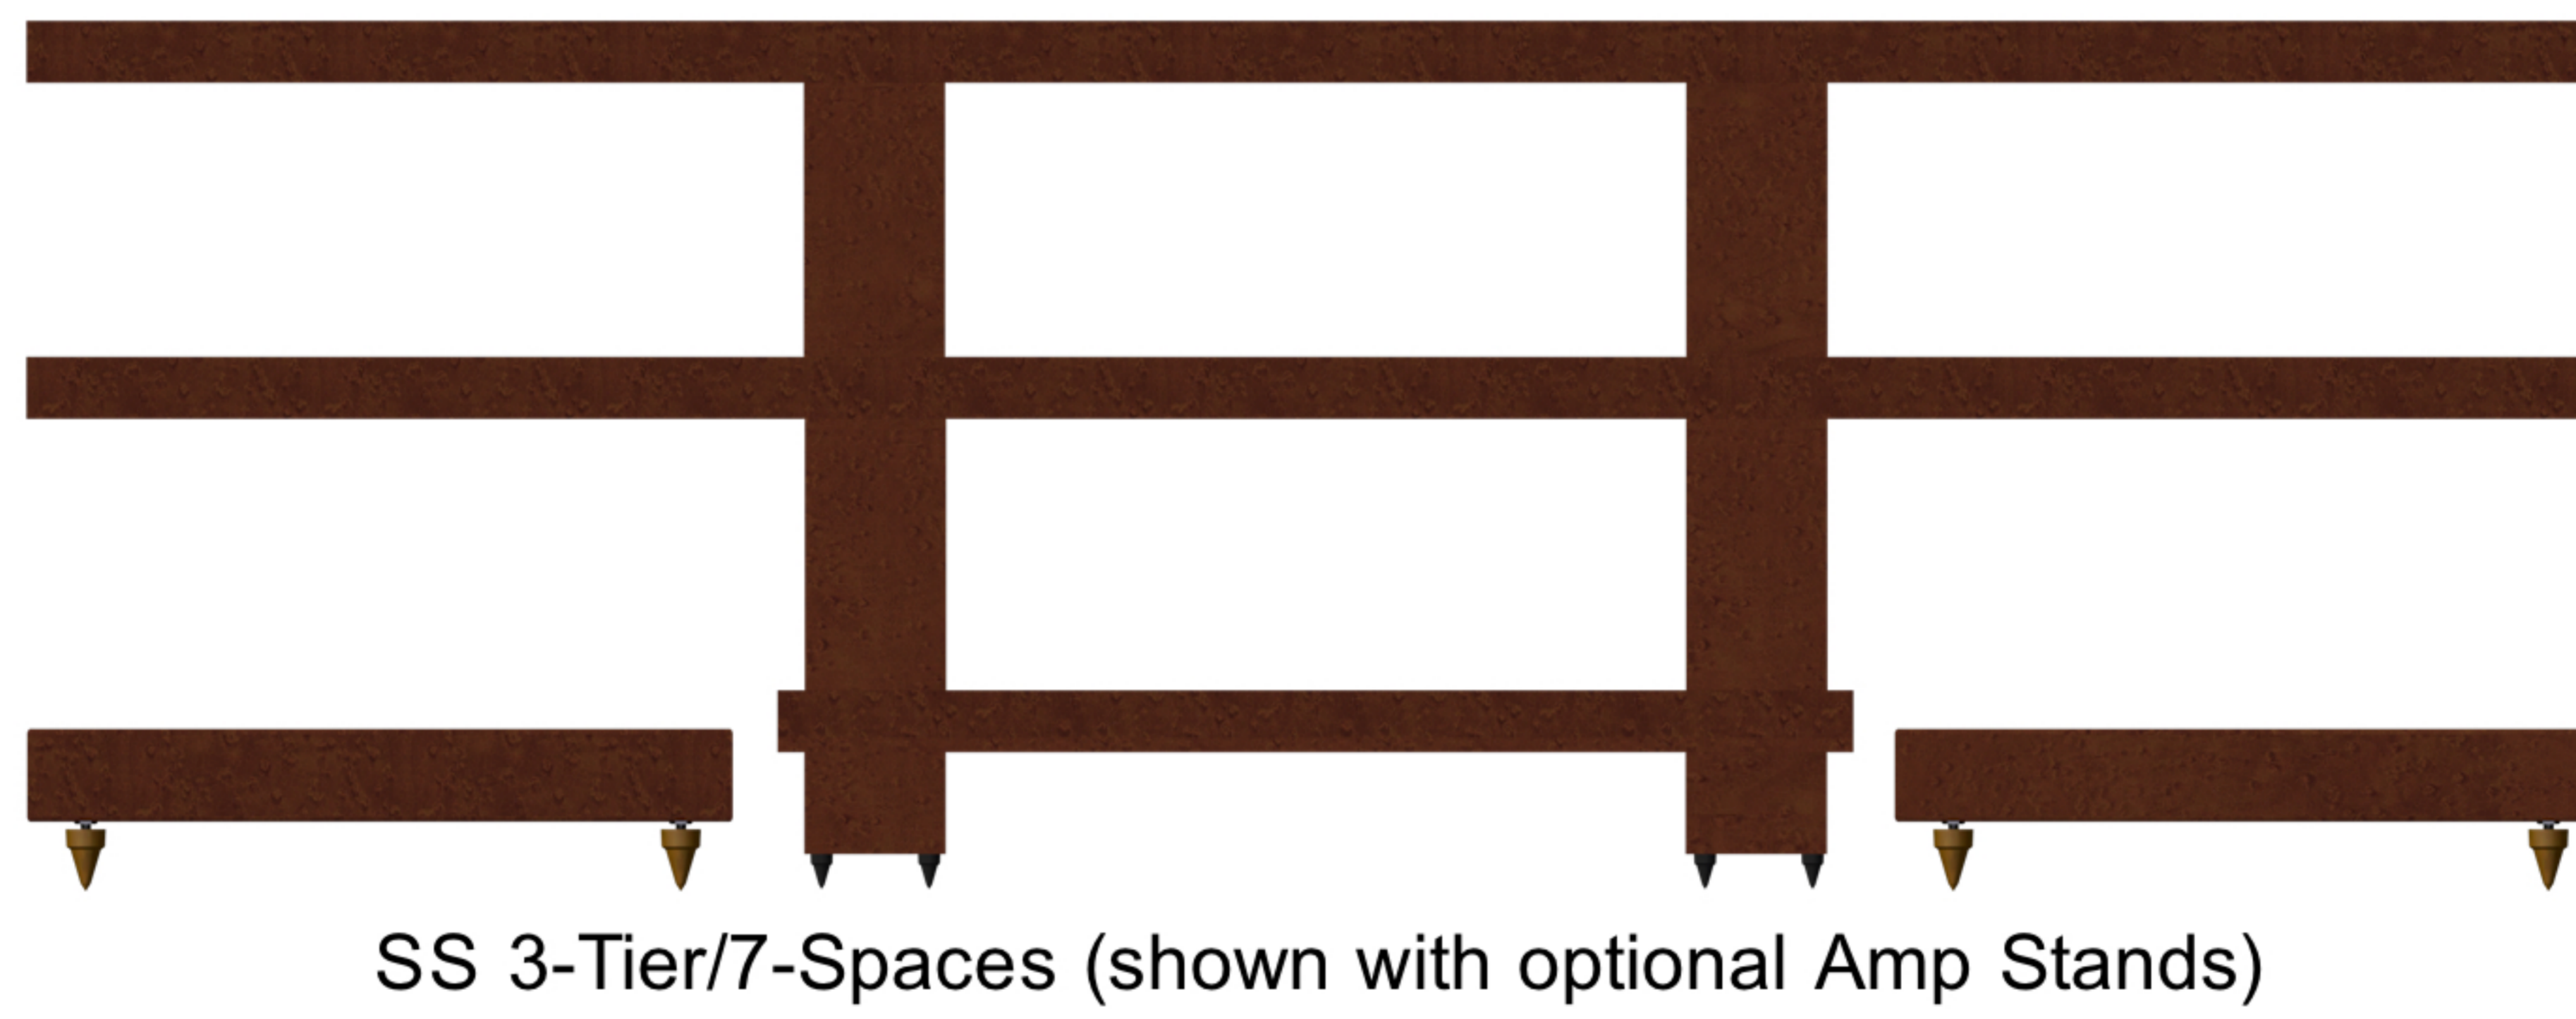

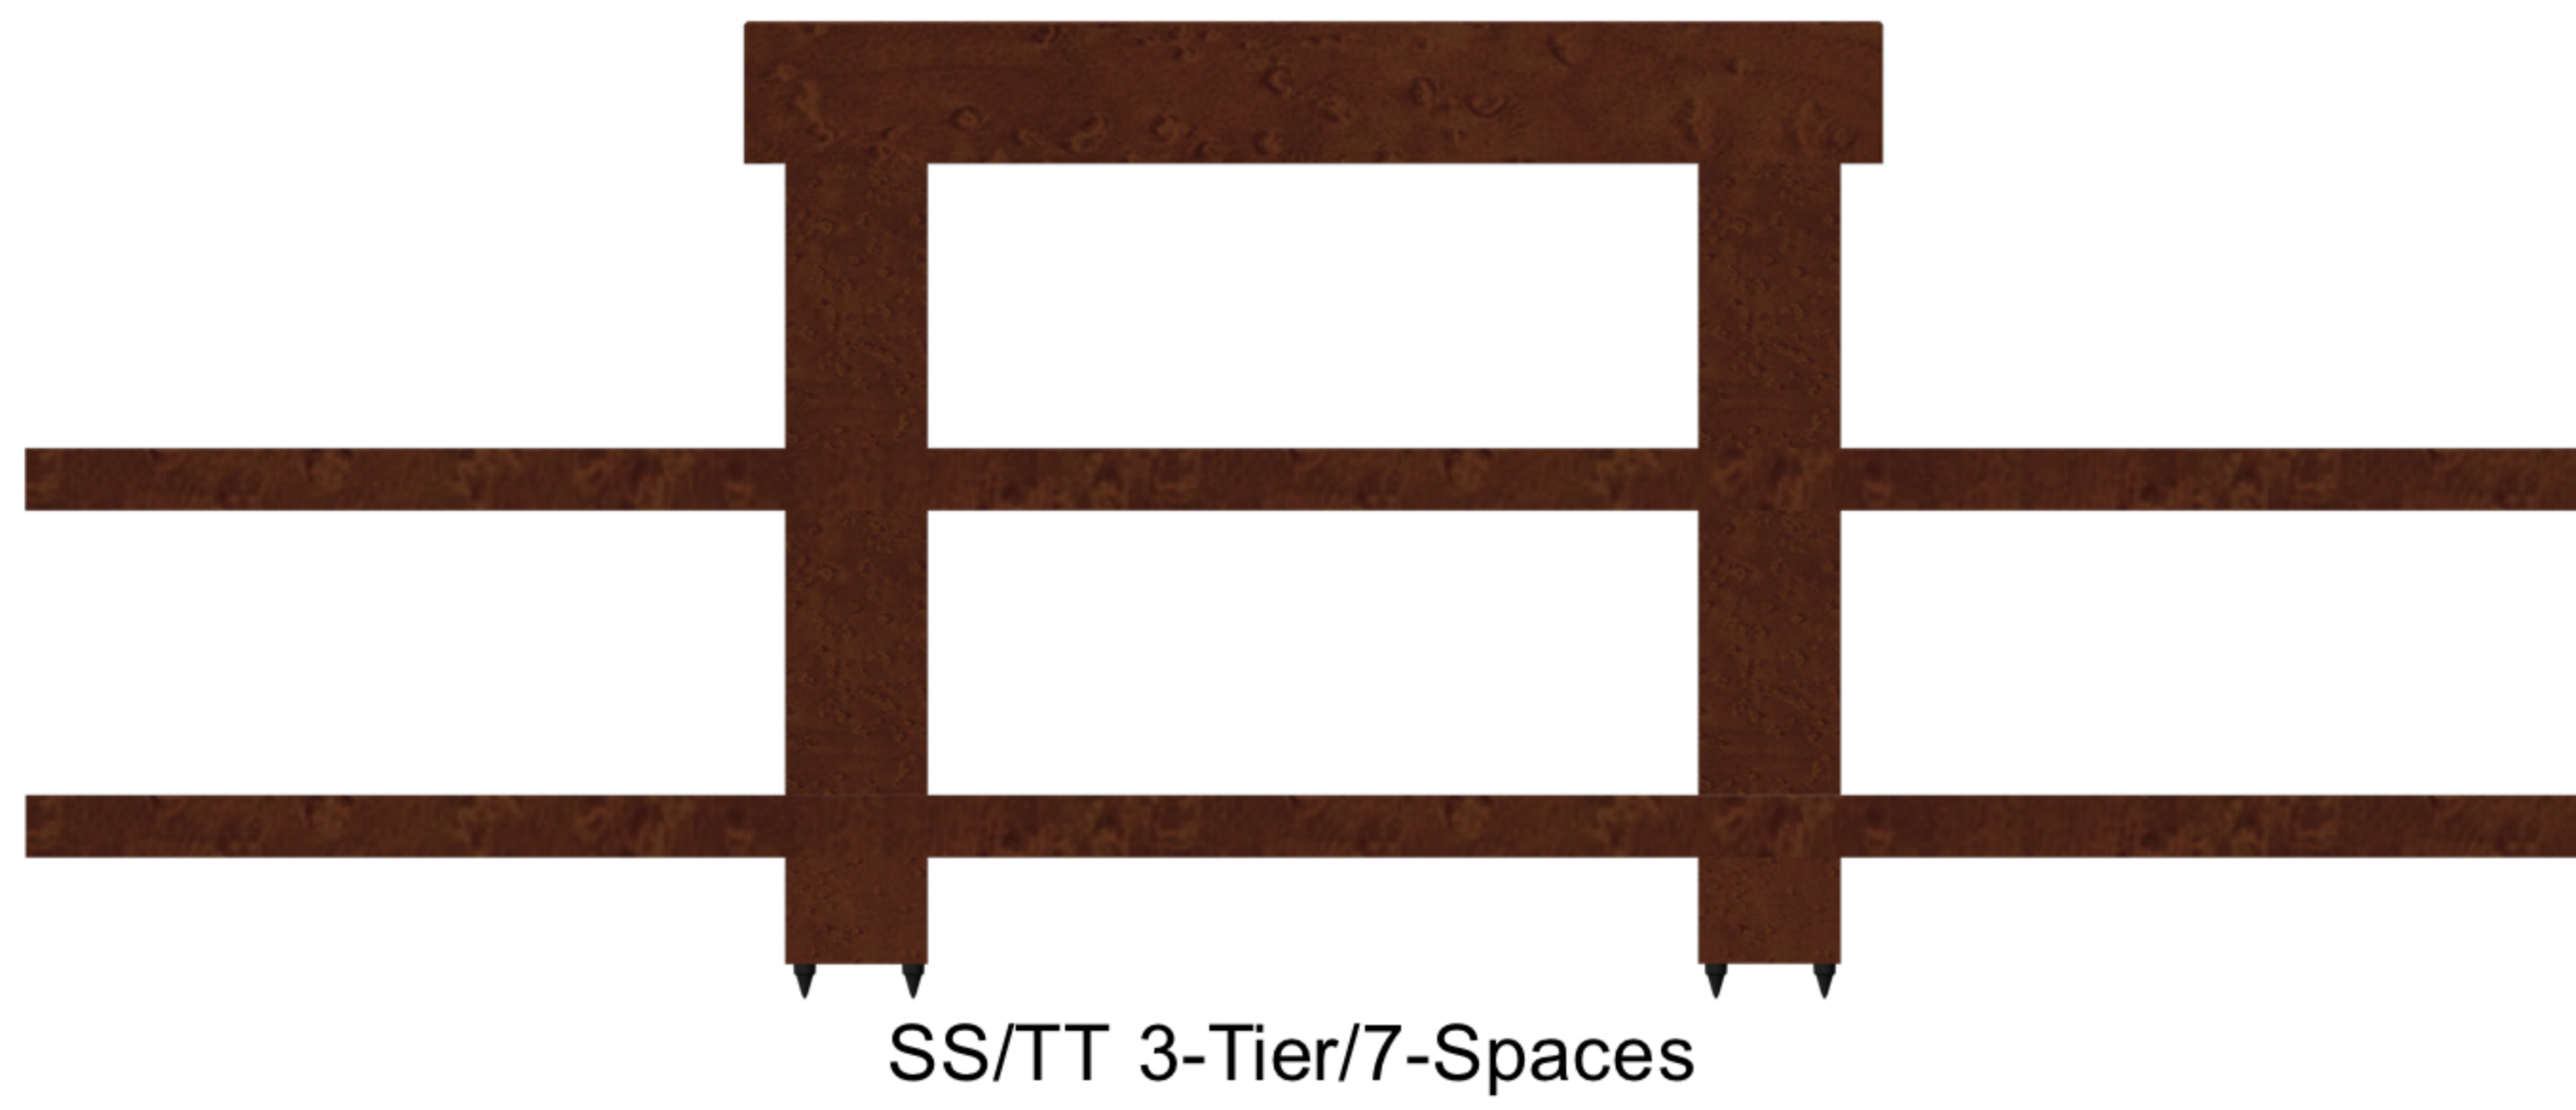

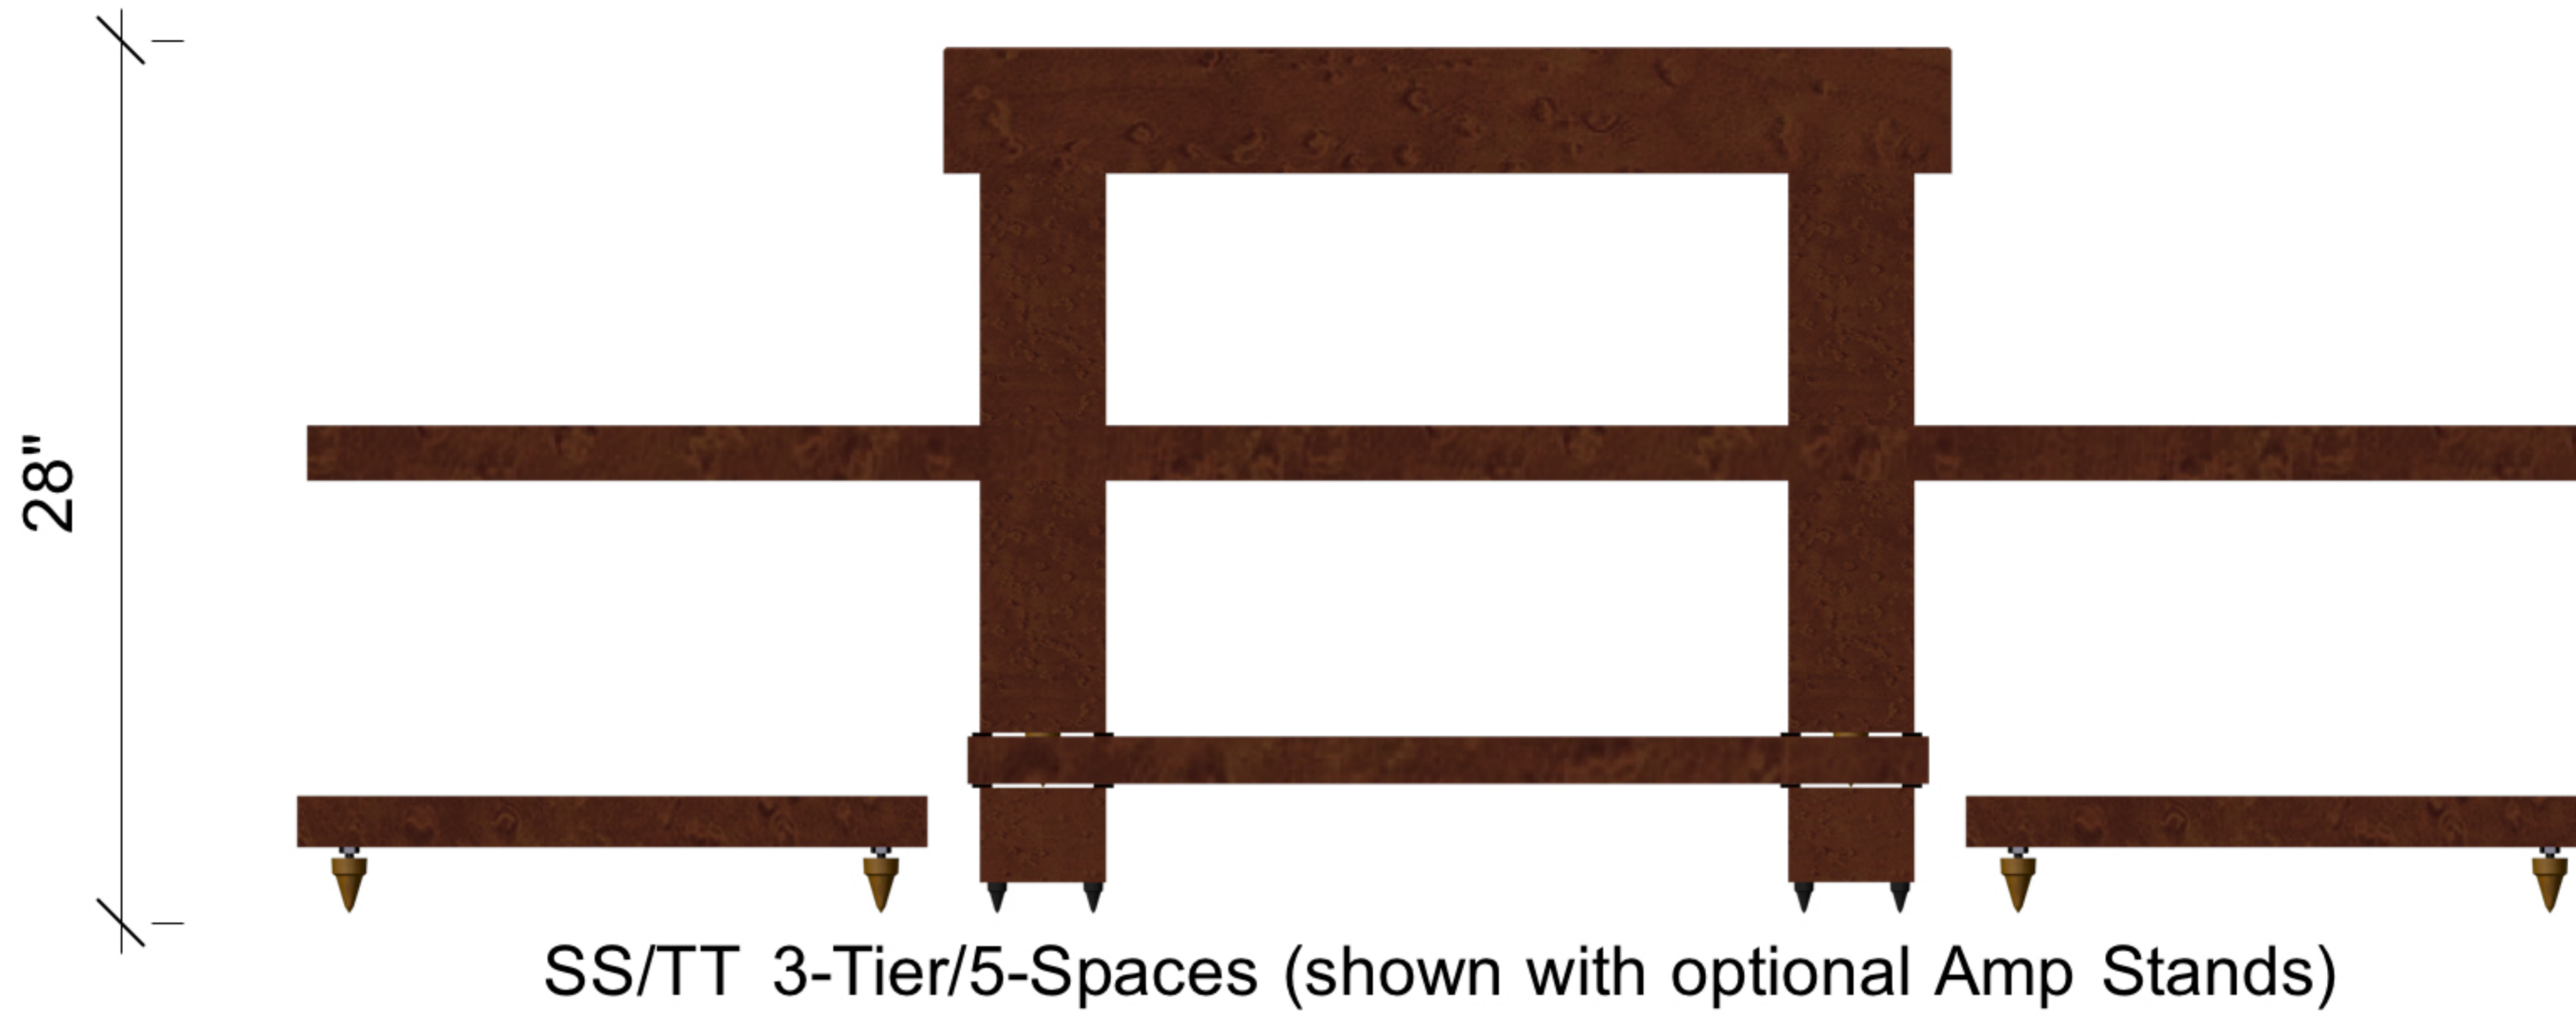

TT w/4 Shelves

The shelf spacing, and the overall height of the stand, is determined by the height of the support blocks. You choose the height of the starter blocks (3" is standard), then determine what height your intermediate support blocks need to be based on your equipment. (6" through 12" in 1" increments)

As a service, a graphic photo-realistic representation of any of our stand designs with the chosen wood type and finish is available upon request.

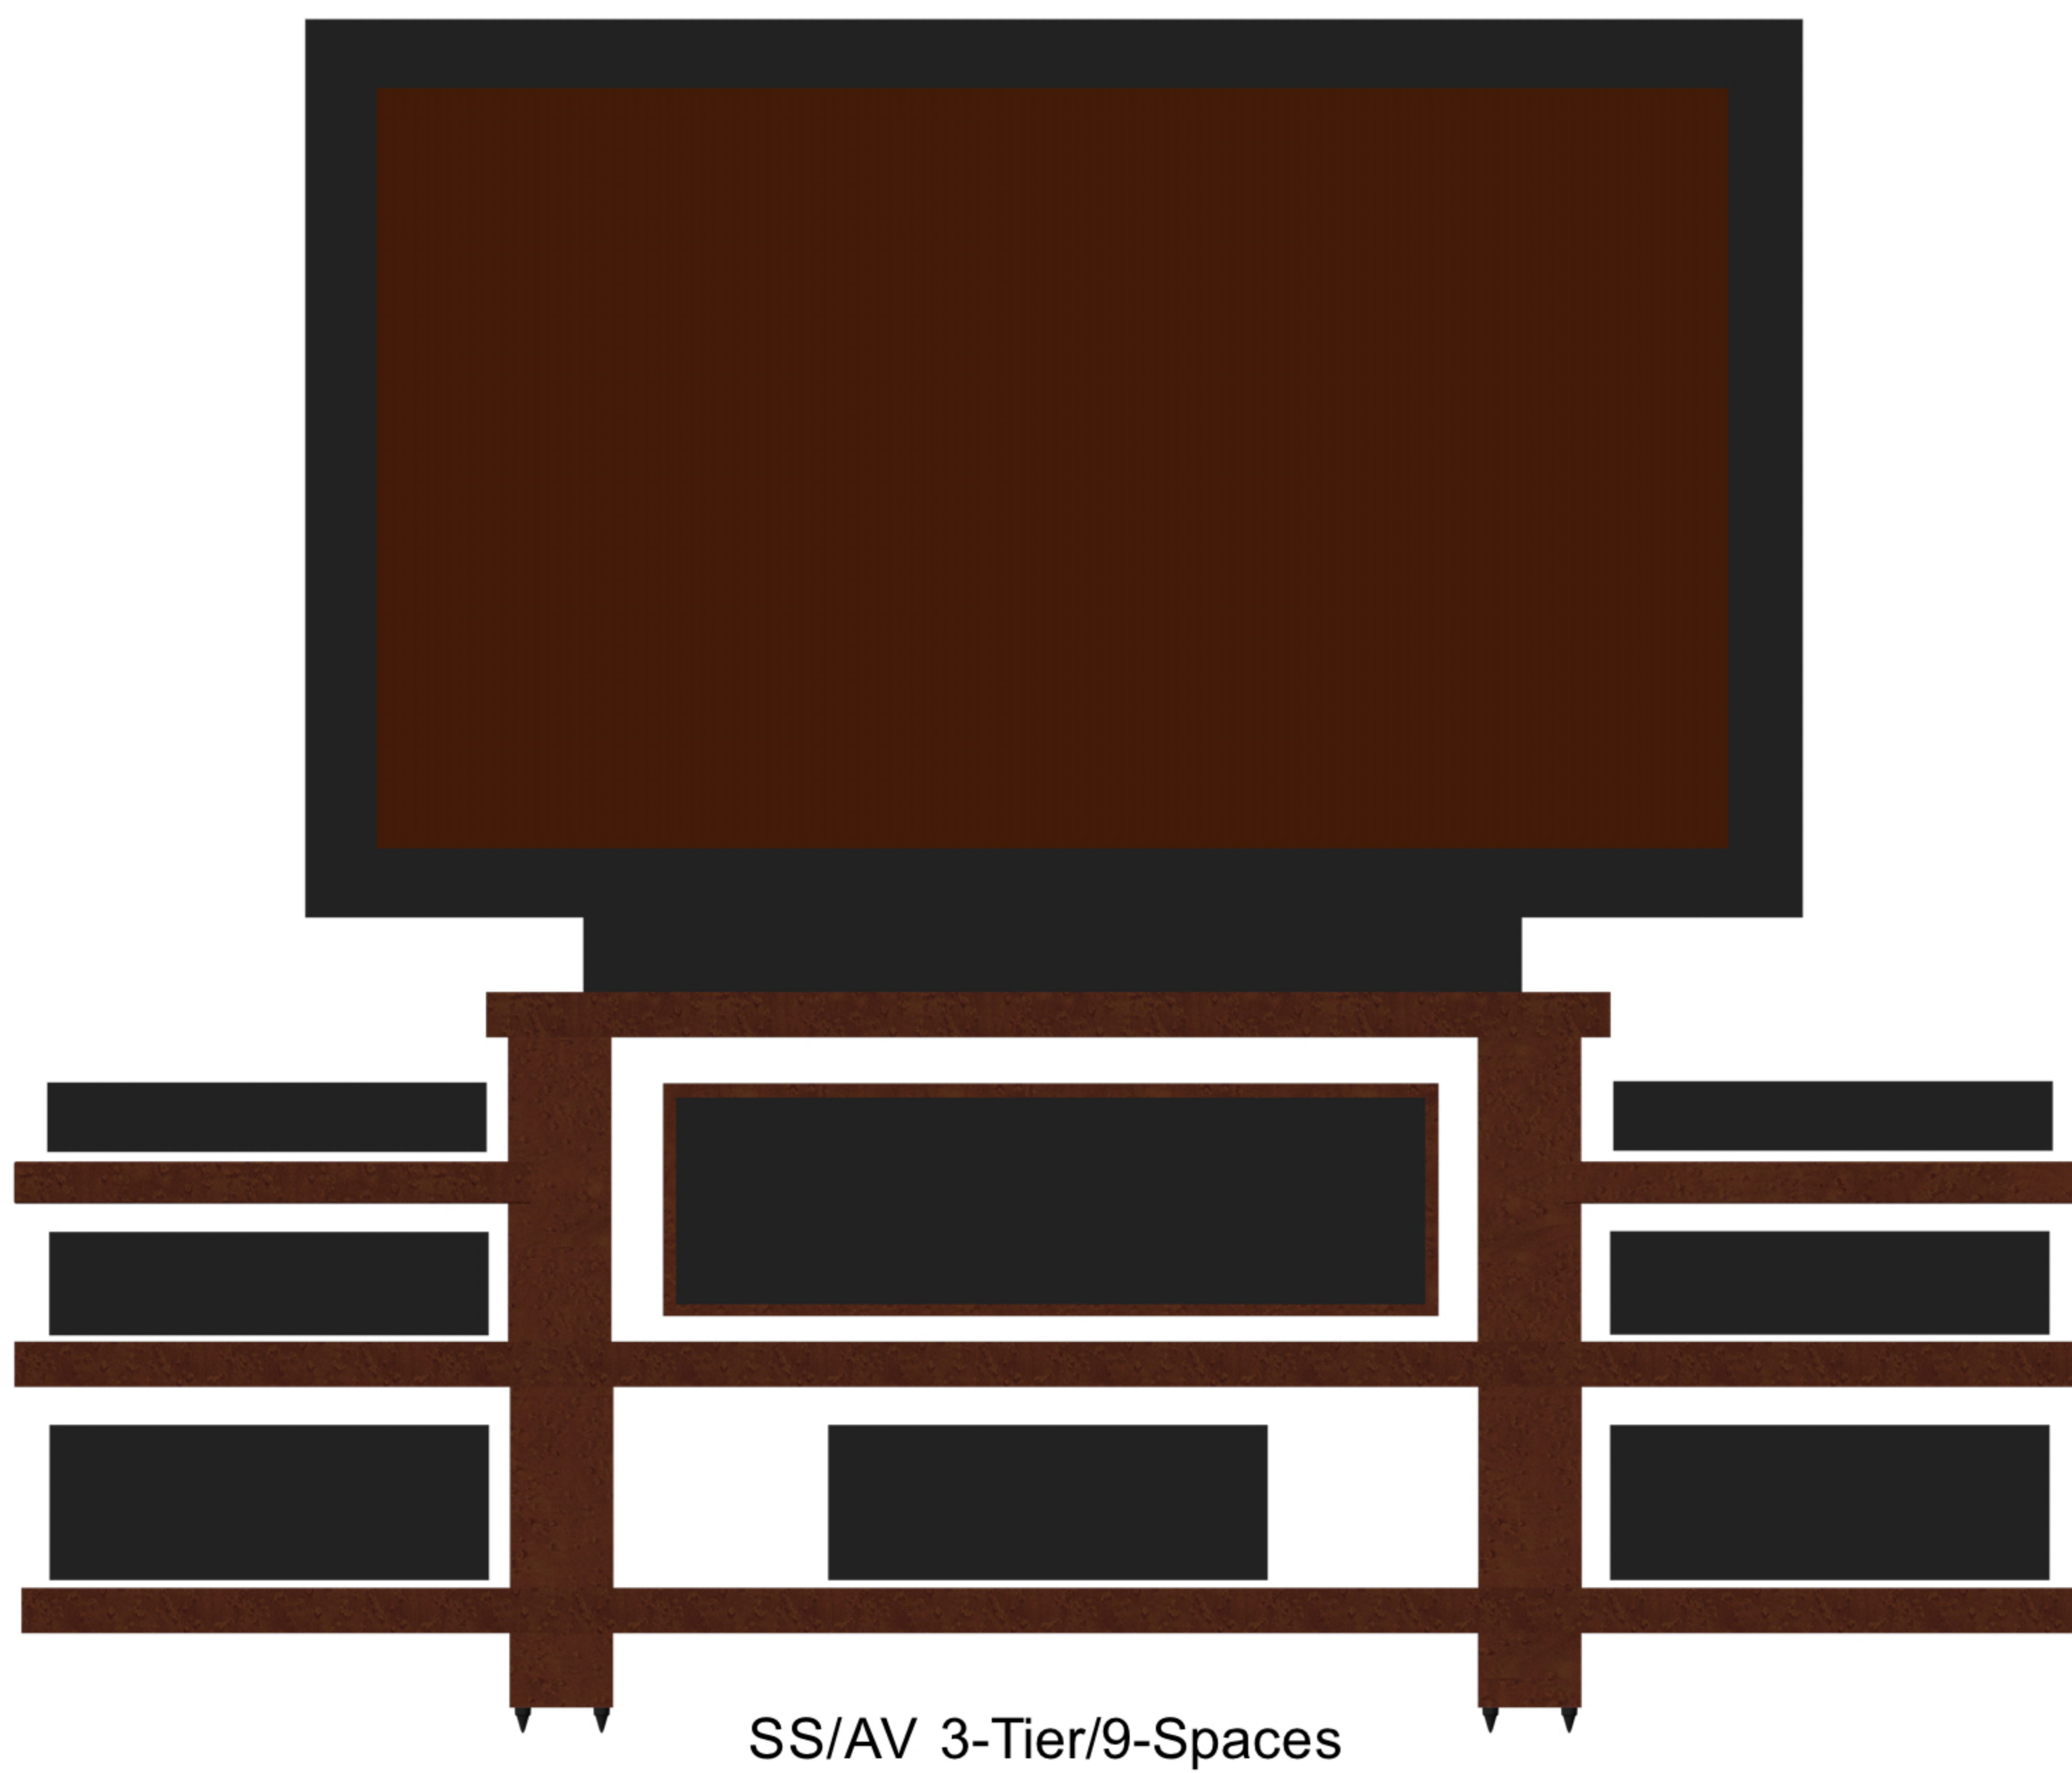

# TRIPLE WIDE

# TRIPLE WIDE AUDIO/VIDEO

The Audio/Video stands are custom. The width of your center channel speaker determines the distance between the support blocks.
